

CAPABILITY STATEMENT

Healing Country. One Project at a Time.

MINE REHABILITATION · CIVIL EARTHWORKS · HEAVY HAULAGE · PLANT & EQUIPMENT HIRE

ABORIGINAL-OWNED & LED · SUPPLY NATION REGISTERED · ABN 88 699 624 372 · WEST PERTH WA

SECTION 01

About Yungu

Yungu Pty Ltd is a proudly Aboriginal-owned and Aboriginal-led contractor delivering integrated **mine rehabilitation, civil earthworks and heavy project logistics** across Western Australia's mining, energy and resources sector.

Established through the partnership of Thalanyji Traditional Owner leadership and experienced mining

and construction professionals, Yungu combines cultural authority with modern engineering and operational discipline. Unlike single-service contractors, we deliver under one accountable partner, fewer interfaces, faster mobilisation, and a single point of accountability, backed by a workforce already on Tier 1 rehabilitation and civil programs across the Pilbara.

INTEGRATED CAPABILITY PILLARS

WA

PILBARA & RESOURCE SECTOR

Country & Culture

Yungu is majority owned and led by Toia Smith, a Thalanyji woman from Onslow, in strategic partnership with Trident Transport, a proven heavy haulage operator delivering across Western Australia and the Northern Territory, so clients deal with a capable, delivery-ready contractor from day one, not a start-up finding its feet.

Thalanyji Country stretches across the Ashburton and Onslow region of the Pilbara, Country that has carried the footprint of the resources industry for generations. Yungu was founded on a simple belief: Country that has been disturbed can be healed, and the act of healing it creates lasting opportunity for our people. Cultural heritage is safeguarded through consultation with Traditional Owners and clearly demarcated protection zones, and Aboriginal knowledge of Country, its seasonal cycles, native seed, land systems and water, sits alongside modern civil engineering in every program we deliver.

Supply Nation registered

Confirmed on Indigenous Business Direct: majority owned and controlled by Indigenous Australians, a verified Aboriginal-led partner for your procurement targets.

“We heal Country and we build futures. Every project we win is a chance to return land to health and create real opportunity for our people.”

Our Purpose

Mining, energy and resources activity leaves a footprint. Our purpose is to return that land to stable, productive and sustainable landscapes, while creating meaningful employment for Aboriginal people throughout Western Australia.

Every hectare rehabilitated represents more than environmental compliance. It represents respect for Country, long-term stewardship, and a future built together, one landform, one road, one delivery at a time.

Our Safety

Everyone goes home safe, every day.
Anyone can stop work that is not safe.

Our People

Structured training and pathways that
build real careers in the resource
sector.

Our Respect

We respect the land, protect the
environment and honour cultural
heritage.

Our Integrity

We do what we say we will do:
transparent, accountable, on schedule.

Our Community

Partnering with Traditional Owners
and local communities to multiply
benefit.

Sustainability

We build outcomes that endure long
after our machines leave site.

“Healing Country. Building Futures.”

Our Capability

From progressive rehabilitation during operations through to landform reconstruction, civil infrastructure, heavy plant mobilisation and final relinquishment, Yungu delivers across the full mine life as one integrated partner.

PILLAR 01

Mine Rehabilitation

Progressive rehabilitation, landform reconstruction and mine closure.

PILLAR 02

Civil Earthworks

Bulk earthworks, access roads, drainage and civil infrastructure.

PILLAR 03

Heavy Haulage & Project Logistics

Oversize plant transport and end-to-end project logistics.

PILLAR 04

Plant & Equipment Hire

Modern, well-maintained plant available for dry or wet hire.

One contract. One team. One point of accountability.

Mine Rehabilitation

Yungu specialises in progressive rehabilitation, landform reconstruction and mine closure, combining modern civil engineering with traditional ecological knowledge of Country. We treat rehabilitation as a discipline that begins long before the first machine is mobilised, and continues well after the last seed is sown.

CORE CAPABILITIES

- Earthworks & landform reconstruction: cut and fill, batter construction, crest bunds and non-erosive design
- Topsoil & growth media management: stripping, stockpiling and replacement to protect seed bank and microbial life
- Revegetation & seeding: deep ripping, surface preparation and calibrated mechanical seeding with native species
- Erosion & drainage control: sediment controls and water management established before disturbance

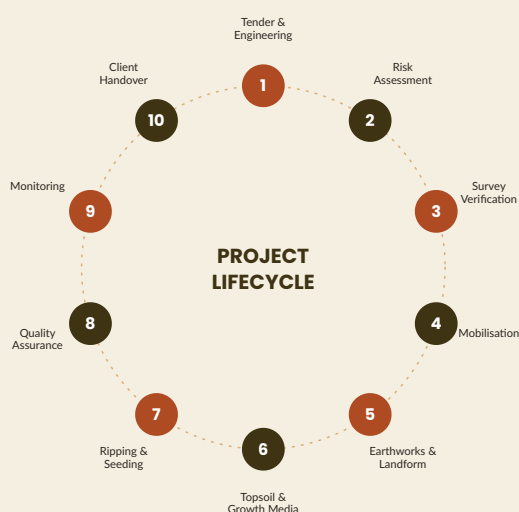

DELIVERED WITH CONFIDENCE

- Access track construction, rehabilitation and civil maintenance across the resource sector
- Progressive monitoring and environmental maintenance through to formal relinquishment
- GPS-enabled survey workflow: verifiable as-constructed data at every stage, through to handover
- Delivered by a workforce already active on Tier 1 rehabilitation and civil programs across the Pilbara

THE EARTHWORKS AND REVEGETATION SEQUENCE

THE YUNGU PROJECT LIFECYCLE

Verified at every stage against design tolerance, not just at the end.

PILLAR 02

Civil Earthworks

From site establishment to bulk earthworks, Yungu delivers the civil scope alongside rehabilitation and mine construction, with the plant, people and project controls to move material safely, accurately and on schedule across remote WA sites.

CORE CAPABILITIES

- Bulk earthworks, cut and fill, and material balancing for pads, platforms and laydown areas
- Access road and haul road construction, formation, drainage and maintenance
- Site establishment, clearing and civil infrastructure works
- Drainage structures, culverts and water management civil works

PLANT & DELIVERY CAPABILITY

- D9 / D10 class dozers for large-scale push, ripping and spreading
- 36 to 100 tonne excavators for cut, load and rock placement
- Articulated dump trucks for haulage of fill and waste materials
- Graders, rollers and water carts for fine grading, formation and dust suppression

Civil and rehabilitation are planned as one continuous program, not two separate contracts: less double-handling, more stable landforms, one accountable partner from tender to handover.

Heavy Haulage & Project Logistics

Delivered in strategic partnership with Trident Transport, an established WA project logistics operator with a standardised Kenworth prime mover fleet, Tier 1 project experience and a Zero Harm safety culture: oversized machinery moved safely and efficiently, with no location too far or too remote.

FLEET & EQUIPMENT

- Kenworth prime movers, floats up to 100+ tonnes, drop decks and extendables
- B-doubles, road trains and semi trailers for project freight
- Route surveys, permits, escorts and mobilisation planning managed end-to-end

TECHNOLOGY & CONTROL

- Real-time fleet monitoring and GPS tracking on every movement
- Digital compliance systems and structured daily reporting
- Single point of contact from mobilisation planning through to final delivery

Every movement is planned end-to-end, with a single Yungu point of contact managing the Trident crew from tender to handover.

Plant & Equipment Hire

Modern, well-maintained plant with GPS machine-control technology, available for dry or wet hire across rehabilitation, civil and mining programs. A detailed, project-specific fleet list is provided with every tender.

EQUIPMENT	CLASS	PRIMARY APPLICATION
Caterpillar D10 Dozer	Large dozer	Bulk push, ripping & large-scale landform shaping
Caterpillar D9 Dozer	Large dozer	Push, ripping, spreading & batter construction
Caterpillar D6 Dozer	Medium dozer	Fine trim, access tracks & confined-area works
Caterpillar 352 Excavator	Large excavator	Cut, load, rock placement & drainage formation
Caterpillar 745 Moxy (ADT)	Articulated dump truck	Haulage of fill, topsoil & waste material
Caterpillar 745 Moxy Water Cart	Water cart (ADT-based)	Dust suppression & compaction support
Caterpillar Grader	Motor grader	Fine grading, formation & finishing

Dry or wet hire

Plant supplied with or without Yungu-trained operators.

GPS machine control

Live design surfaces in-cab for accurate, efficient earthworks.

Plant is matched to each program and mobilised as a single, accountable package.

Safety, Quality & Environment

Zero Harm is not a slogan at Yungu, it is the non-negotiable foundation of every decision we make. Everyone has the authority to stop work if it is unsafe. We protect our people, our partners and Country, without exception.

OHS Management System

Aligned to ISO 45001. Pre-starts, JHA, Take 5, hierarchy of controls, and fatigue and fitness-for-work management on every site.

Environmental Management System

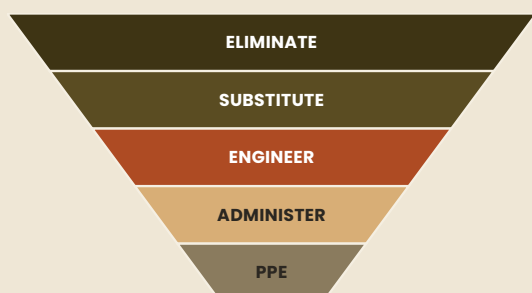

Aligned to ISO 14001. Erosion and sediment controls, flora and fauna protection, weed hygiene, spill response and water quality protection.

Quality Management System

Aligned to ISO 9001. Inspection and Test Plans, hold and witness points, survey verification against design tolerance and formal non-conformance close-out.

Chain of Responsibility

Structured CoR management across every haulage movement: fatigue, mass, loading, speed and vehicle standards accountability at every link.

Hierarchy of controls

Controls are selected from the top down, eliminating hazards wherever possible before relying on lower-order protections. Every crew is trained to identify and control the full spectrum of site hazards before work begins.

ISO 9001

QUALITY MANAGEMENT

ISO 14001

ENVIRONMENTAL MANAGEMENT

ISO 45001

HEALTH & SAFETY

Everyone goes home safe. That is the measure that matters most.

SECTION 06

Our People & Community

Aboriginal ownership and cultural authority, joined with proven delivery experience.

TS

Toia Smith

**DIRECTOR · ABORIGINAL RELATIONS
& CULTURE · THALANYJI**

A proud Thalanyji woman from Onslow and Yungu's majority owner, Toia brings both cultural authority and rigorous grounding to Yungu's leadership, with 10+ years' experience in the resource industry on major LNG construction and operations projects. She founded the No Biru Foundation, creating health and employment pathways for Aboriginal people across the Pilbara, and is commercialising a native seed enterprise, extending Yungu's rehabilitation capability from cut to seed to Country healed.

LF

Luke Field

**DIRECTOR & CHIEF EXECUTIVE
OFFICER**

Luke's career began underground with Redpath Mining before moving into civil construction and shutdowns with Kiewit and commissioning with Bechtel. He led start-up construction and commissioning across Chevron's Australian LNG assets, including high-pressure turnarounds, and held responsibility as a Chevron-endorsed Permit Isolation Officer. That end-to-end path underpins Yungu's commitment to controlled, verifiable, safe execution on every site.

BM

Blake Malcolm

**BUSINESS DEVELOPMENT & PROJECT
COORDINATOR**

Blake brings a hands-on trade background, having trained in carpentry before moving into rigging. He spent six years as a rigger across the FIFO sector, delivering high-risk lifting and mechanical works on major shutdown campaigns throughout WA. That frontline experience gives him a practical understanding of how projects are won and delivered, which he applies to growing client relationships and coordinating projects from tender through to site delivery.

A minimum 35% Indigenous employment target underpins every project, with trainees recruited alongside experienced personnel from day one. Through the No Biru Foundation and Toia Smith's emerging native seed enterprise, Yungu multiplies benefit back into Thalanyji and Pilbara communities long after the machines leave site.

Let's talk about your next project.
